

Push-fit Lubricant

Properties	
Base	Water
Viscosity at 20 °C	80000-100000 cPs

Description

Push-fit lubricant is used to easily insert the pipe into the fittings and to guarantee better preservation of O-rings. By adding this product, the side effects on the O-ring and allergic skin would be limited.

This product is a milky white, highly viscous, soft paste-like water-based product. It is specially designed to lubricate rubber gaskets of pipelines including PVC and Soil pipes. It is ideal for SWR ring-fit, self-fit, sewer, and drain piping systems for low to non-pressure applications. It aids in the assembly of push-on type joints to ensure correct fit.

Benefits:

- Non-flammable, Non-toxic, Non-corrosive
- Outstanding protection against fretting wear and corrosion
- Extend service life
- Minimal friction
- Facilitation of the run-in process, diminishing frictional force and surface damage

Application

For optimal O-ring preservation, it is advisable to facilitate the seamless insertion of the pipe into the fittings.

Storage and Handling

The products, when stored in their original sealed containers in a dry environment at 20°C, exhibit an approximate shelf life of 12 months.

Safety

Handle with care, and wear appropriate personal protective equipment (PPE) to mitigate potential skin and eye irritation during the use of Push-fit Lubricant.
